

TABLETS WITH ANDROID OS – Product

a) Type, format, and estimated amount of data

- **Types of data:**
 - Location (GPS – if the device has GPS; Wi-Fi-only models use approximate location based on Wi-Fi networks)
 - User activity (screen time, touch interactions, gestures)
 - Device status (battery, temperature, memory, CPU)
 - Diagnostic data and usage statistics (app usage frequency, error reports)
 - Network data (Wi-Fi network name, signal strength, data transfer)
 - Sensor metadata (e.g., accelerometer, gyroscope – if present in the model)
- **Data formats:** XML, CSV, binary, system logs
- **Estimated data volume:** From a few MB per day to several hundred MB per month – depending on usage intensity and enabled services (e.g., synchronization, backups).

b) Real-time data generation

A tablet can generate data continuously and in real time, e.g., during location tracking (if supported), app usage monitoring, and system status reporting.

c) Data storage

- **Locally:** App data, browsing history, user files, system logs – stored until manually deleted or after a factory reset.
- **Remotely (Google Cloud):** Backups, synchronized accounts (contacts, calendars, documents, photos) – typically retained for up to 57 days after backup is disabled or until manually deleted.
- **Automatic deletion:** Some system logs are cleared periodically (e.g., every 7–30 days).

d) Data access, download, and deletion

- **Access and download:**
 - In Android settings: *Settings* → *Privacy* → *Your data in Google*
 - Via Google Takeout (takeout.google.com) – full data export option
- **Deletion:**
 - Locally: through app settings, file manager, or factory reset
 - Remotely: via Google account or privacy management panel
- **Technical measures:** Privacy Dashboard (Android 14+), GDPR- and Data Act-compliant APIs
- **Service conditions and quality:** Data access requires an active Google account, a functional device, and an internet connection

TABLETS WITH ANDROID OS – Related Service

a) Data collected by the service

- **Nature:** Location (if supported), app usage data, diagnostics, error logs

- **Volume:** From a few dozen KB to several hundred MB per month
- **Frequency:** Collected in real time or during synchronization (e.g., once a day)
- **Storage:** Stored on Google servers until manually deleted or automatically removed after a defined period (e.g., 57 days after backup deactivation)

b) Data generated by the service

Synchronization history, error reports, and backup metadata – available for download via Google Takeout.

c) Use of data

Google uses data to provide services such as synchronization, personalization, and security. Users may consent to share data with third-party apps and services.

d) Identity of future data holder

Google Ireland Limited, Gordon House, Barrow Street, Dublin 4, Ireland (for EU users).

e) Means of communication

Contact via support.google.com, help forms, and the privacy center.

f) Request for data sharing with third parties

Available in Google account settings → “Data sharing” or in app settings.
Consent may be withdrawn at any time.

g) Right to lodge a complaint

Users may file a complaint with the data protection authority – in Poland, UODO (uodo.gov.pl).

h) Trade secrets

Google acts as the data controller and may hold proprietary trade secrets regarding data analysis algorithms.

i) Duration of the agreement

The agreement remains in effect as long as the Google account is active.
Account deletion ends data processing and removes most associated data.
